

The Smart Square Terminal

The Smart Square Terminal can be made available in Stainless Steel or coloured Terra Cotta, Beige or Charcoal. Note that the base inserts into a 225mm (9") square opening which would be the normal for an unlined masonry or block chimney - with or without a slab terminal. Where the chimney incorporates a square terra cotta chimney liner, normally having an internal 185mm square flue, specials to suit can be made to order. As the chimney constructions into which this terminal can be inserted may have a variety of dimensions and be of different materials, please provide as much information as possible so that a terminal can be provided which is ideal for the intended application.

The Terminal is fitted with a collar which sits onto the surrounding masonry when the device is simply pushed down into the chimney flue. No further securing is necessary as the barbs will engage on the surface of the flue to provide considerable resistance to upward removal by adverse wind conditions.
